找到<u>https://github.com/mobz/elasticsearch-head</u>插件官方github网址,在作者下面可以看到一句话

Running as a plugin of Elasticsearch (deprecated) 过时

- for Elasticsearch 5.x: site plugins are not supported. Run as a standalone server
- for Elasticsearch 2.x: sudo elasticsearch/bin/plugin install mobz/elasticsearch-head
- for Elasticsearch 1.x: sudo elasticsearch/bin/plugin -install mobz/elasticsearch-head/1.x
- for Elasticsearch O.x: sudo elasticsearch/bin/plugin -install mobz/elasticsearch-head/0.9
- open http://localhost:9200/_plugin/head/

所以不能再用/bin/plugin -install mobz/elasticsearch-head安装了

下载head插件

wget https://github.com/mobz/elasticsearch-head/archive/master.zip unzip cd elasticsearch-head-master

安装node

head插件本质上还是一个nodejs的工程,因此需要安装node,使用npm来安装依赖的包。

有两种安装方式

第一种: curl -sL https://rpm.nodesource.com/setup_8.x | bash - yum install -y nodejs

安装grunt

grunt是基于Node.js的项目构建工具,可以进行打包压缩、测试、执行等等的工作,head插件就是通过grunt启动

cd elasticsearch-head-master

npm install -g grunt-cli //执行后会生成node_modules文件夹npm install

elasticsearch-head 不能放在elasticsearch的 plugins、modules 目录下,否则elasticsearch启动会报错

修改vim Gruntfile.js文件: 增加hostname属性, 设置为*

```
connect: {
    server: {
       options: {
          port: 9100,
}
```

vim /usr/local/elk/elasticsearch/config/elasticsearch.yml 在最后添加以下三条属性:

- 1. http.cors.enabled: true
- 2. http.cors.allow-origin: "*"
- 3. http.cors.allow-credentials: true
